The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis

New isolated mycobacteria polypeptides and nucleic acids - used developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis.

         protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (1) fusion polypeptide comprising at least one polypeptide fragment (1) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPTS9 and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment that encodes the above polypeptides. The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for vaccination against TB caused by Mycobacterium tuberculosis, africanum or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                             The invention
                                                                                                                                                                                                        Example
                                                                                                                                                                                                                                                                            WPI; 1999-347282/29.

The invention relates to a novel DNA derived from a human adult brain, tonsil, hippocampus and human fetal brain and its encoded polypeptide, at given in the specification. The novel DNA is useful as a diagnostic agent. The encoded polypeptide is useful as a reagent for screening pharmaceutical compounds which inhibit the biological activity of the polypeptide. A gene containing the novel DNA is useful as a probe for diagnosing the increased expression of damage, mutation or expression reduction in the human DNA. This sequence represents the protein derived from a novel human DNA sequence used in the screening and disgnostic method of the invention. Note: This sequence is an embedded protein taken from the coding DNA shown in the sequence listing of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     previous sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CFP7A or CFP3OA or a T-cell epitope of for the induction of a strong immune response in a mammal; use of CFP7B, CFP19 or MPT59-ESAT6 or a T-cell epitope of for diagnosis of TB in a mammal by performing a DTH type skir test; use of CFP27, CFP3OA, RD1-ORF2, RD1-ORF3, RD1-ORF5, MPT99-ESAT6, ESAT6-MPT59, CFP3OA, CFP16, CFP3, CFP23A, CFP3OB, CFP7B or a T-cell epitope of for the preparation of an immunological composition; and for the preparation of a subunit vaccine
                                                                                                                                                                                                                                            86
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            06-OCT-2005

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ž S
reticuloendotheliosis viral oncogene-B Rel homology domain (RelB RHD).
The invention also relates to a method of identifying at least one test compound that alters binding of RelB RHD to the RelB-kappa-B sequence involving contacting the nucleotide sequence with the polypeptide sequence in the presence and absence of the test compound and detecting sequence of the test compound and detecting elevance of the test compound and detecting sequence of the test compound and detecting caltered specific binding of the nucleotide with the polypeptide in the presence of the test compound compared to that in the absence of the test compound that alters binding of RelB Rel homology domain (RelB RHD) with RelB-C kappaB sequences and the therapeutic compounds that alter inhibitor of nuclear factor kappa-B kinase alpha (IKK-alpha) subunit related pathologies. The isolated nucleotide segments are effectively and selectively recognized by RelB:p52 in comparison to ReaL:p50 and RelB:p50 domains. The isolated nucleotide sequence does not bind to RelB, ReaL. p50, RelB:p50, ReaL:p50 and ReaL:p50 and RelB; ReaL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                              Isolated nucleotide sequences mediating functions of inhibitor of nuclear factor kappa-B kinase alpha subunit useful for identifying therapeutic compounds that alter the subunit related pathologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Reticuloendotheliosis viral oncogene-B Rel homology domain; RelB nuclear factor kappa-B; NFk-B; gene expression.

```

The invention relates to a method of modulating a steroid receptor or a process mediated by a steroid receptor in a cell comprising administering a polypyridimine tract binding protein-associated splicing factor (RSF) polypeptide, a polynucleotide encoding a RSF polypeptide (RSF) polymucleotide), an isolated complex of a RSF polypeptide and a steroid receptor (RSF complex) and/or their agonist or antagonist. The invention also relates to a method of inhibiting transactivation domains of a steroid receptor in a cell by administering to the cell a RSF polypeptide, polynucleotide, complex, and/or their agonist, a method of stimulating transactivation domains of a steroid receptor in a cell by administering to the cell a RSF polypeptide, polynucleotide, complex, and/or their agonist, a method of stimulating transactivation domains of a steroid receptor in a cell by

a PSF polypeptide,

polynucleotide and/or a PSF

                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, CC immunosuppressant and cytostatic activity. The polypucleotides are useful CC in gene therapy. A composition containing a polypeptide or polypucleotide CC in gene therapy. A composition treat diseases of the peripheral nervous gystem, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central neurous system diseases, such as CC Allaheimer's, Parkinson's disease, Huntington's disease, amyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activity chemotactic/chemokinetic activity, haemostatic CC and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and CC c.N.S disorders. Note: The sequence data for this patent did not form

The invention relates to a method of modulating a steroid receptor or a CC process mediated by a steroid receptor in a cell comprising administering CC a polypyridimine tract binding protein—associated splicing factor (PSP) CC polypyridimine tract binding protein—associated splicing factor (PSP) CC polypucleotide, a polynucleotide encoding a PSF polypeptide (PSF) CC polynucleotide), an isolated complex of a PSF polypeptide and a steroid receptor (PSF complex) and/or their agonist or antagonist. The invention CC also relates to a method of inhibiting transactivation domains of a steroid receptor in a cell by administering to the cell a PSF polypeptide, polynucleotide, complex, and/or their agonist, a method of CC stimulating transactivation domains of a steroid receptor in a cell by CC complex antagonist, a method of treating a subject with a condition CC mediated by a steroid receptor or characterized by an abnormality in a steroid receptor or characterized by an abnormality in a steroid receptor or characterized by an abnormality or complex and/or their agonist, and a method of complex polypeptide, complex and/or their agonist or inhibiting or complex polypeptide, complex and/or their agonist or inhibiting or complex polypeptide, complex and/or their agonist or antagonist. The methods care useful for modulating a steroid receptor or process mediated by a steroid receptor or individual having a condition mediated by a steroid receptor or individual having a condition mediated by a steroid receptor or characterized by an abnormal level of interaction between a PSF polypeptide and a steroid as a steroid receptor and a steroid as a steroid receptor or characterized by an abnormal level of interaction between a PSF polypeptide and a steroid condition mediated by a steroid receptor or characterized by an abnormal level of interaction between a PSF polypeptide and a steroid condition mediated by a steroid receptor signal transduction pathway and/or an abnormal level of interaction between a PSF polypeptide and a ster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś

The methods are useful for preventing or treating a condition mediated by a steroid receptor in a subject and for evaluating a substance for its ability to regulate the onset of labor by reacting a PSF polypeptide and a progesterone receptor and a test substance, where the PSF polypeptide and receptor bind to form a complex and comparing to a control in the absence of the substance to determine if the substance at imulates or inhibits the binding of the PSF polypeptide to the receptor and thus regulates the onset of labor. The methods are also useful for preventing and/or treating pre-term labor, for inducing labor in a subject, for preventing or treating a condition mediated by a pre-term or premature labor, for medualing the risk of pre-term or premature labor, for reducing the risk of pre-term or premature labor, for reducing the risk of such as domestic for controlling the timing of parturition in animals, such as domestic animals. This sequence represents a human SFPQ protein used in the scope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

밁 S 밁 δ 용

The invention relates to a method of modulating a steroid receptor or

Protein-associated splicing factor; PSF; PSF-F; labor; parturition; cytostatic; gynecological; tocolytic.

premature labor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc steroid receptor signal transduction pathway and/or an abnormal level of interaction between a PSF polypeptide and a steroid receptor by comparing the interaction in cells or inhibiting or promoting the activity of a PSF complex, and a method of preventing or treating a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor by administering a condition mediated by a steroid receptor or process mediated by a condition mediated by a steroid receptor or individual having a condition mediated by a steroid receptor or characterized by an condition mediated by a steroid receptor or characterized by an condition mediated by a steroid receptor or characterized by an condition mediated by a steroid receptor signal transduction pathway and/or an cabnormal level of interaction between a PSF polypeptide and a steroid receptor. The methods are useful for preventing or treating a condition mediated by a steroid receptor in a subject and for evaluating a condition condition and projector in a subject and for evaluating a control in the absence of the substance to flabor by reacting to a control in the absence of the substance to determine if the substance of preventing and/or treating pre-term labor, for inducing labor in a subject, for preventing or treating a condition mediated by a projector for stopping labor preparatory to Cesarean delivery or for controlling the timing of parturition in animals, such as domestic of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SXXXXXXXXXXX

                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                   abnormality in a steroid receptor signal transduction pathway and/or an abnormal level of interaction between a PSF polypeptide and a steroid receptor. The methods are useful for preventing or treating a condition mediated by a steroid receptor in a subject and for evaluating a substance for its ability to regulate the onset of labor by reacting a PSF polypeptide and a progesterone receptor and a test substance, where the PSF polypeptide and receptor bind to form a complex and comparing to a control in the absence of the substance to determine if the substance stimulates or inhibits the binding of the PSF polypeptide to the receptor and thus regulates the onset of labor. The methods are also useful for preventing and/or treating pre-term labor, for inducing labor in a subject, for preventing or treating a condition mediated by a progesterone receptor, for modulating the onset of labor, for preventing pre-term or premature labor, for reducing the risk of pre-term or premature labor, for stopping labor preparatory to Cesarean delivery or for controlling the timing of parturition in animals, such as domestic

                              immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, cancer disgnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                 The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC which consider the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying an agent CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the composition, a method for identifying a method for producing a pharmaceutical composition, a contribution of a method for identifying a compound or small molecule that regulates the contribution of the regulates the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the cc activity in an animal of one or more of the polypeptides given in the Specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC polypeptides or their antibodies. The polymucleotide or the compound that conjupy (CCI) and spared nerve injury (Chung), chronic constriction CC injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: CT he sequence data for this patent did not form part of the printed CC specification, but was obtained in allocations form the printed CC specification, but was obtained in allocations form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
